

Ubong Joe Joshua

Uyo, Akwa Ibom, Nigeria | dreamgotwings@gmail.com | +234 705 613 8784 | murpheus.me | github.com/murpheus007

Professional Summary

Fullstack Developer and Cybersecurity student with hands-on experience building production-grade web applications, AI agent systems, and containerized deployments. Background in UI/UX design with a certified foundation in Figma-based design thinking. Combines technical development skills with security awareness and design sensibility to build products that are functional, usable, and secure.

Education

B.Sc. Cybersecurity — University of Uyo, Akwa Ibom, Nigeria *December 2024 - Expected November 2027*

Certifications

UI/UX Design Bootcamp — Devanddesign (2022)

- Figma-based design thinking, user research, wireframing, prototyping
- Completed before transitioning into frontend development with React

Technical Skills

Area	Technologies
Frontend	React, React Native, Next.js, Astro, HTML/CSS, TailwindCSS, Figma
Backend	Node.js, Express.js, Flask, FastAPI
Database	PostgreSQL, SQLite, Supabase
DevOps & Infrastructure	Docker, Docker Compose, Nginx, Nginx Proxy Manager, Linux
AI / LLM Systems	Agent orchestration, sub-agent pipelines, cron-based automation, sentiment analysis
Other	Git, REST APIs, GraphQL, WebSockets, yt-dlp, Telegram Bot API, WhatsApp Bot API

Projects

StreamBolt — Social Video Downloader

Fullstack — React, Node.js, Express, Docker, yt-dlp, Telegraf, Baileys

- Built a full-stack social media video downloader supporting YouTube, Instagram, TikTok, Twitter/X, Facebook, Vimeo, and Reddit
- Three entry points: Web UI, Telegram Bot, and WhatsApp Bot — all converging on a single Express backend
- Implemented streaming downloads via yt-dlp child process piping (no server-side buffering)
- Docker multi-stage build with ffmpeg, Python, Deno, and yt-dlp pre-installed
- SQLite analytics dashboard tracking downloads, platforms, and uptime
- **Live:** streambolt.tech

Chainstellar — Creative Writer & Technical Analyst Portfolio

Fullstack — Astro, React, TailwindCSS

- Built a portfolio website for a creative writer and Solana blockchain technical analyst
- 7 sections: Hero, Skills (bento grid), Best Works (19 articles/threads), Recognitions (timeline), Why Me (CTA), Navbar, Footer
- Astro static site generation with React islands for interactive components (navbar drawer, scroll-triggered animations)
- Framer Motion hero animations, IntersectionObserver scroll reveals, dark mode with CSS custom properties
- Multi-stage Docker build (Node builder → Nginx Alpine runner) behind shared reverse proxy with SSL
- **Live:** chainstellar.site

Birdeye — Solana Trading Dashboard

Fullstack — React, Flask, PostgreSQL, Redis, Discord.py, Docker

- Built a full-stack cryptocurrency trading dashboard for the Solana blockchain with 9 pages: Landing, Explorer, Radar, Token War Room, Watchlist, Whales, Whale Detail, Alerts, Settings
- 17+ API endpoints across discovery, analysis, auth, alerts, and user management powered by Flask + Unicorn
- Real-time data from Birdeye public API (trending tokens, whale wallets, OHLCV, security checks, trade data)
- Discord bot with 4 synced slash commands and Redis pub/sub alert listener for real-time notifications
- Session-based auth with Solana wallet signature verification (challenge-response flow)
- Redis-backed alert system: rules stored in PostgreSQL, mirrored to Redis for fast lookups
- 5-service Docker Compose deployment (frontend, backend, bot, PostgreSQL, Redis) behind Nginx Proxy Manager with SSL
- **Live:** birdey radar.site

Deriverse — Wallet-Aware Trading Analytics for Solana

Fullstack — React, Vite, TypeScript, Supabase, TailwindCSS

- Built a wallet-aware trading analytics dashboard that ingests trade fills from CSV imports, mock data, or live wallet sync
- Dual-mode architecture: demo mode works fully offline with 100 mock fills in localStorage; wallet mode enables cloud persistence via Supabase anonymous auth with row-level security
- Derived trade engine: pairs raw fills into complete trades computing PnL, return %, duration, and order type mix — all client-side with no server round-trips
- Nonce-based wallet signature verification using Supabase Edge Functions (Deno) with replay attack prevention

- 6 pages: Dashboard, Trades, Journal, Portfolio, Calendar, Settings — with multi-wallet support and active account scoping
- Money-safe arithmetic using integer-cent representations to avoid floating-point rounding errors
- CSV import with per-row validation and error reporting; JSON export for data portability

GenieVirtualTalk — E-Commerce & Remote Work Recruitment Platform

Fullstack — React, Express, Stripe, Appwrite, TailwindCSS

- Built a full-stack platform for Genie Talk Telecommunications LLC — a virtual call center connecting people to work-from-home customer service jobs with Fortune 500 companies
- Dual-purpose: recruitment marketing site (hero, services, application form, testimonials) + full e-commerce store selling digital career resources
- Complete e-commerce flow: product catalog → cart → shipping → Stripe PaymentIntents → order confirmation → order history
- Idempotent payment intent creation with sessionId deduplication to prevent duplicate charges on refresh
- Stripe webhook handler with raw body parsing for HMAC signature verification
- User authentication via Appwrite (email/password + OAuth2 social login) with protected routes
- Context-driven state management (UserContext) for auth, cart, profile, and order history
- Dual deployment: frontend on Vercel, backend on Render
- **Live:** genievirtualtalk.vercel.app

AceAgent — AI Tennis Prediction System

AI/LLM — Agent orchestration, Python, cron automation, data pipelines

- Built an automated AI agent pipeline for ATP tennis match predictions
- System architecture: match discovery → parallel gatherer + analyst sub-agents → synthesis → CSV logging
- Gatherer agent: fetches H2H data, surface stats, recent form from tennismylife.org API
- Analyst agent: runs 11-point sentiment checklist using web search for pre-match signals
- Automated daily cron pipeline (7 AM predictions, 10 AM score fetching)
- 4 years of historical ATP match data (2023–2026) with match-level statistics

Professional Experience

Community Moderator — MahjongMeta

2023 – 2024

- Managed and moderated a crypto gaming community
- Handled user engagement, conflict resolution, and community guidelines enforcement
- Coordinated with development team to relay user feedback and bug reports

Community Moderator — Qorpo Games Studios

2021 – 2022

- Moderated gaming community channels across Discord and Telegram
 - Organized community events and managed user onboarding
 - Provided first-level support and triaged technical issues
-

Additional Information

- **Languages:** English (fluent)
- **Availability:** Open to remote full-time, contract, and freelance opportunities
- **Interests:** Fullstack remote development, frontend engineering, AI agent systems, cybersecurity
